

## Sprinkle Capsules

The number of patients that have difficulty swallowing is increasing rapidly. Capsugel has developed an innovative solution that makes it easy to extend existing product lines and reach this growing population.

Coni-Snap® is a newly designed capsule that enables contents to be orally administered by simply sprinkling the contents into soft food. And it's far easier to open than traditional capsules.

### Saves time, money and headaches.

Reformulating a product into a liquid or an ODT and identifying a delivery format adapted to specific patient groups used to be cumbersome, time consuming and expensive. But with Coni-Snap® sprinkle — which is specially adapted to the established processes of multi-particulates or beads formulations — there's no need for complex reformulation or altered production processing.

### Innovative and easy to fill.

The locking mechanism on standard hard capsules requires sufficient grip strength and dexterity to reopen the capsule. Coni-Snap® sprinkle capsules replace that with an innovative closure much easier and safer to open. And it can be filled on the same machines as traditional capsules, while remaining in place during packaging and transportation.

### Proven easy to use.

Consumer tests have confirmed that Coni-Snap® sprinkle capsules are easier to open than traditional capsules. In fact, 81% of participants — including parents, caregivers and elderly patients — described the design as easy or very easy to open.

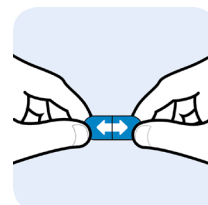

### A New Generation Of Patient-Centric Capsules

## Easier To Open.\* To Help You Access New Markets.

Global evaluation of product performance by 37 participants in 3 panels

- Parents of young children
- Nurses
- Unimpaired adults over the age of 80

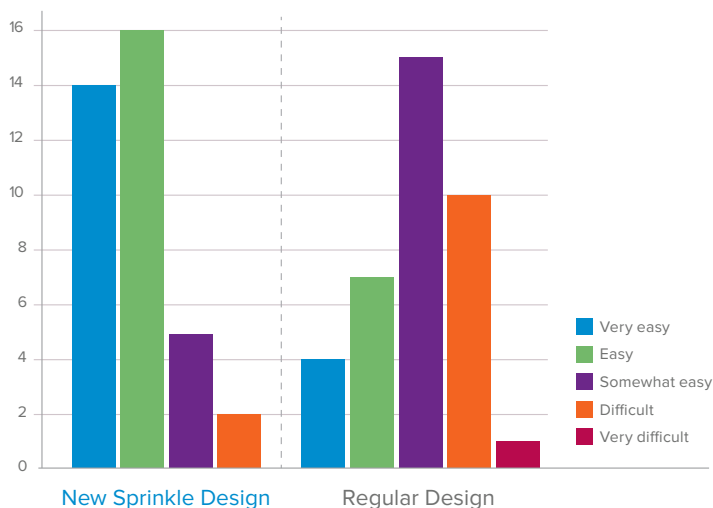

Evaluation of easiness to open

New sprinkle design:

81% of participants evaluated new design to be “very easy” or “easy.”

Standard Coni-Snap®:

29% of participants evaluated as “very easy” or “easy.”

## Key Benefits

- The first capsule specifically designed for patients with swallowing issues
- Ideally suited for pediatric and geriatric patients
- Allows single to multiparticulate conversion
- Versatile usage: can be swallowed and/or sprinkled
- Allows accurate dosage
- Available in HPMC capsules for hygroscopic fill compounds

## Key Features

- Easy to handle and open
- Proven delivery system, based on traditional multiparticulate technology
- Secure containment during transport, packaging and filling
- Identical fill properties as standard capsules
- Works on all standard filling equipment
- Printable capsules
